

## ACTO Response to The Digital Personal Data Protection Bill, 2022

| Chapter/Section                                 | Original Text  | ACTO Suggestions   |  |  |
|---|--|--|--|--|
| Chapter 1: Preliminary-                         | (1) This Act may be called   | We request that there should be  |  |  |
| Short Title and                                 | the Digital Personal Data  | adequate transition timeline for   |  |  |
| Commencement                                    | Protection Act, 2022.<br>(2) It shall come into force on<br>such date as the Central<br>Government may, by<br>notification in the Official<br>Gazette, appoint. Different<br>dates may be appointed for<br>different provisions of this<br>Act. Any reference in any<br>provision of this Act to the<br>commencement of this Act<br>shall be construed as a<br>reference to the<br>commencement of that<br>provision.                      | implementation. As currently stated<br>in the bill there is no implementation<br>timeline, creating uncertainty for the<br>industry. The previous version had<br>provision for 24-month transitional<br>period. Thus, we request a phased<br>implementation period of 36<br>months in order to provide clarity for<br>businesses, organizations, and<br>individuals to change processes and<br>systems, recognizing the time<br>needed to allocate investments and<br>systems upgrades. It will also<br>enable the Government of India to<br>provide further clarifications. As<br>compliance is dependent on the<br>rules, the transition period should<br>also start once the Board is formed<br>and rules are framed. |  |  |
| Chapter 2: OBLIGATIONS<br>OF DATA FIDUCIARY     |  |  |  |  |
| Grounds for processing<br>digital personal data | A person may process the<br>personal data of a Data<br>Principal only in accordance<br>with the provisions of this Act<br>and Rules made thereunder,<br>for a lawful purpose for which<br>the Data Principal has given<br>or is deemed to have given<br>her consent in accordance<br>with the provisions of this<br>Act. For the purpose of this<br>Act, "lawful purpose" means<br>any purpose which is not<br>expressly forbidden by law. | We request that the grounds for<br>processing digital personal data<br>alongside Section 17 should<br>consider adding generally<br>recognized international frameworks<br>for data processing such as SCCs,<br>BCRs, and other grounds embedded<br>into GDPR and widely utilized in<br>current contracts for data<br>processing, outsourcing and<br>information technology (IT) enabled<br>services.   |  |  |
| Chapter 4: Special<br>Provisions                |  |  |  |  |
| Transfer of personal data<br>outside India      | The Central Government<br>may, after an assessment of<br>such factors as it may<br>consider necessary, notify<br>such countries or territories<br>outside India to which a Data<br>Fiduciary may transfer<br>personal data, in accordance<br>with such terms and   | We would like to highlight that a<br>country-by-country adequacy<br>assessment will be very time-<br>consuming exercise, therefore India<br>needs to consider global best<br>practices in this regard and notify the<br>countries already deemed adequate<br>for example the European Union<br>(EU) under the basis of General Data<br>Protection Regulation (GDPR), as  |  |  |

|   | conditions<br>specified.   | as | may | be | well as other countries adhering to or<br>having received adequacy under the<br>rules.  |
|---|----------------------------|----|-----|----|---|
|   |                            |    |     |    | Furthermore, rules should allow for<br>transfer mechanisms such as private<br>agreements, e.g., Standard<br>Contractual Clauses (SCC), Binding<br>Corporate Rules (BCR) already<br>approved in other global markets as<br>suitable exemptions recognized by<br>other leading privacy frameworks to<br>account for commonplace business<br>and commercial needs. The rules<br>should provide the necessary<br>flexibility for businesses to follow the<br>transfer mechanism already<br>approved in other leading data<br>privacy jurisdictions to avoid country<br>specific reviews and adequacy<br>assessment by incorporating<br>recognition of additional global<br>transfer mechanisms.                             |
| Alignment with the sector specific requirements |                            |    |     |    | Additionally, ACTO would like to<br>request that the existing sector<br>specific data privacy requirements<br>need to be aligned with the<br>horizontal data protection<br>requirements to the extent possible<br>to avoid inconsistency and alignment<br>with the requirements as well as<br>provide much needed clarity and<br>respite from the redundant<br>compliance obligations.  |
| General   |                            |    |     |    |   |
|   | Timelines f<br>and Other E |    | •   |    | Unlike its previous drafts, there are<br>no specific timelines for compliance<br>prescribed for the implementation of<br>the proposed law. This should be<br>defined clearly, so that businesses<br>can plan their compliances<br>accordingly. It should also be<br>clarified that the Proposed Law will<br>only apply prospectively not<br>retrospectively. The Proposed Law<br>does not prescribe or recommend<br>the standards that should be<br>implemented. There are some other<br>laws where there may be provisions<br>contrary to this Proposed Law. For<br>E.g., RBI has mandated payments<br>data localization but under Section<br>17 of the Proposed Law cross border<br>data transfer may be permissible. |

|  |     | This may create confusion in terms   |
|--|-----|--|
|  |     | of compliance. Hence, clarity is required in this regard.  |
| Data Breaches<br>Reporting Obligations | and | (i) The broad definition of the term<br>"personal data breach" as "any<br>unauthorised processing of<br>personal data or accidental<br>disclosure, acquisition, sharing,<br>use, alteration, destruction of or<br>loss of access to personal data,<br>that compromises the<br>confidentiality, integrity or<br>availability of personal data"<br>coupled with the absence of any<br>condition or threshold applicable<br>to the reporting requirement will<br>place a heavy burden on<br>organisations that will have to<br>notify immediately any security<br>and processing incident<br>regardless of its nature, severity<br>and impact, to both the Data<br>Protection Board and the<br>individuals. |
|  |     | Further, considering that failure<br>to notify a personal data breach<br>can be sanctioned by a fine of up<br>to USD 25 million, will<br>significantly increase the<br>financial risk organisations will<br>be exposed to.   |
|  |     | ACTO recommends to consider<br>framing the notification<br>obligation, in particular, by<br>introducing criteria related to the<br>severity of the incident and its<br>consequences for individuals in<br>a way similar to the GDPR.   |
|  |     | <ul> <li>(ii) Notably, under the DPDP, data<br/>breaches would need to be<br/>reported to the relevant<br/>authorities (CERT-In) within a<br/>mere 6 hours (as defined by<br/>Indian Computer Emergency<br/>Response Team (CERT-In) in<br/>their 28 April 2022 notification).<br/>By way of comparison, the<br/>GDPR specifies a time period of<br/>72 hours, and Australia works on<br/>a guidance timeframe of 30<br/>days. Hence, it is requested to</li> </ul>   |

|  | provide reasonable | e timeframe |
